Features:

1. Microcomputer controller used,set the data easily.
2. Stepper motor is used for wiring, which is driven by current control circuit with high speed and accuracy.
3. The position of starting and winding points can be input in a teachable way, and the current position of the spool can be displayed.
- 4.0-999 sets of files to set the capacity, which can store up to 999 kinds of products of different specifications. As long as the step sequence of the product is called out, the product can be directly produced.
5. The starting and winding points, width, line spacing, winding number and speed of the product can be segmented to achieve multi-segment and multi-speed targets.
6. Pedal switch device, quick and convenient production operation.Application: speaker coil, paper coil, hollow coil, communication coil, etc.
