FEATURES:

Hook Type Transformer Winding Machine has 4 standard hook size with specials available.

Air operated with air compressor for Hook Type Transformer Winding Machine
Hook Type Transformer Winding Machine (a.k.a. pull winding) is a useful technique for manufacturing toroidal products where the Inside Diameter (I.D.) of the toroid is too small for a conventional shuttle or magazine to pass through it.

Programmable winding direction,winding returns range(Turns or Angle) and segment winding angle

Accurately wire spacing by programmable controller

A pre-cut length of wire is pulled though the centre of the toroidal core by means of a hook driven by a pneumatic cylinder, the stroke length being adjustable by means of magnetic sensors.

ADVANTAGES:

Hook Type Transformer Winding Machine efficiency is high. The winding efficiency can be greatly improved by appropriately adjusting the brake to match the corresponding speed.

All the wire crossing parts can ensure that the wire is not damaged.

High versatility of parts and easy maintenance.

Complete varieties, wide wire diameter cross domain, can be used in one machine
The exchange line is good. Various types of wearing parts can be interchangeable

APPLICATION:

Toroid Winding Machine is the best suited to toroidal inductor, toroidal transformers,toroidal current transformers,toroidal coil, toroid choke coil, power inductors,UPS inductor,converter inductor and heavy toroidal core etc.
